Introducing Spookfish’s Australian Capture Program.

Spookfish’s ability to quickly capture, process and publish incredibly detailed and very accurate imagery over many thousands of square kilometres is genuinely unique. Our Australian Program captures high resolution imagery over more than 173,000km², including seven capital cities and 31 of Australia’s most populous regional areas.

This Spookfish Australian Program Guide outlines our entire Australian Program, including exactly which cities, towns and suburbs are within these survey footprints. Together, these surveys cover communities that are home to around 83% of Australia’s population, or more than nineteen and a half million people. An overview of these communities is shown in this Guide, along with detailed maps of each survey.

The Guide is updated regularly as we add new cities and regions to our Australian Program.
